Why **Basilguard - Ultron** Bio Decontamination disinfection practice need for us?

Rededication, decontamination, transportation and disposal of materials associated with COVID-19 response actions & related activities is our social responsibility and need to protect our family.

Our emergency response teams are on the ground, disinfecting local and national businesses in every industry, from airlines and manufacturing facilities to office spaces, schools and universities.

We are ready to help – our emergency response line is open 24/7.

Depending on the surface, we utilize three methods of disinfection :

Wiping :

Hand wiping high touch areas, like desks, keyboards, phones, door handles, microwaves, vending machines, timeclocks and machinery controls.

ULV fogging - Hydrostatic fogging :

Spraying high traffic areas, such as locker rooms, break rooms, and cafeterias.

Thermal Fogging :

High level dry fogging in open spaces such as hallways, auditoriums and production facilities, Outside of the designated area, and a decontamination zones.

Disposal : Disinfected PPE is placed into a container, which is sealed and disinfected, before being sent to offsite for safe.

Basilguard - Ultron protecting the health & safety of your workplace and employees, it is important to work with companies you can trust, that have the experience to safely and thoroughly handle your situation.

All of our plans include sterilization, disinfection, and planning for emergency issues.

Healthcare :

We'll meet your industry's standards, providing you with a layer of protection.

We'll decontaminate your facility if an infectious outbreak has occurred, and we'll prevent pathogens from reproducing.

Food Service :

We know that one outbreak could shut down your restaurant or food truck forever. That's why we put a plan in place to disinfect invisible pathogens in all areas of your business, even the hard-to-reach, out-of-sight areas.

Education:

Nothing is more precious than children and future India and we take their health and safety seriously.

Our disinfection and decontamination services at schools and day cares do more than just make things look clean, we eliminate invisible pathogens and provide extended protection against the spread of infectious disease.

Athletic Facilities:

We understand how easy it is for pathogens to spread in a facility like a gym. We'll test your facility for current contamination, assess your risk, and create a safe plan to protect your business and your customers.

Veterinary Offices:

Your clients are some of the most lovable and friendly in the world, and we want to protect those furry friends and their owners from harm. We'll create a customized plan that takes all the special considerations of a vet's office into account.

Homes:

And what about your home? As the place where we retreat from the world, our homes should be clean & protected against pathogens. Our disinfection services will keep your home looking clean, smelling clean, and feeling clean. We'll help eliminate harmful pathogens from your home, and prevent their return.

Basil Hygiecare - All the products are approved by FDA & having MSDS and COA. BioShields® products are FDA (India) approved and effective against all pathogens including Methicillin-Resistant Staphylococcus aureus (MRSA), Vancomycin-Resistant Enterococci (VRE), Multi-drug resistant M. tuberculosis, Glutaraldehyde-Resistant M. We are going to spray the products by ULV Fogger, mist blowers & thermal fogging as per need and emergency. Regular usage of disinfectants on the surface by mopping/spraying, regular interval sanitation and Personal hygienic is ultimate bio security practice and save the life. Use Havisan H+ or Microlyse regularly.

The above products are going to use as a virucidal, Bactericidal and yeasticidal which are using in all corporate hospital.

We are going to bio decontamination service by using world class disinfectants used in hospitals, Pharmaceutical and Food industries.

Basiguard - Ultrion is a service code of bio Decontamination practice which covers Cleaning, Disinfection and Sterilisation & Deodorization of contaminated area.

Covid 19 is strong enveloped virus and need to destroy its GENOME completely with Silver metal Peroxide formulations - Silvicide or Quaternary Ammonium Compound based Combination products such as Havisan, Havisan Extra, Havisan special or Totasep for effective results. Chlorine is only act on surface of the virus and can't penetrate into the virus very well. An ideal Disinfectant damage the cell wall, bind the protein and coagulation. Finally denature the nucleic acid, DNA and RNA by coagulation of proteous matter and inactive. Virucidal activity will be occurred. Nothing beyond science & technology.

It is essential for control of Infection, Prevention and Assurance for sterilization for a better environment. We have confirmed the quote for the below services @ Rs 2.50/ Sq ft (Rates inclusive GST, transportation, Labour, Man, Material, Service)

Why do we have a procedure?

The purpose of this procedure is ensuring a quality sanitation system in the place for effective bio decontamination of all equipment premises used before, after and between each operation. Its for bio security and for social responsibility.

Aim :

To eradicate the pandemic microorganisms in the premises by Biocidal activity of chemo gaseous sterilant and avoid the cross contamination of microbes from one area to other areas.

Standard Operating Guidelines :

- Remove all unwanted material and waste in the disinfection area.
- Only use chemical disinfectants if absolutely necessary.
- Choose an appropriate disinfectant, compatible with the surface being disinfected and approved by the customer.
- Wear protective clothing (and respirators if required).
- Ensure adequate ventilation. Check the disinfectant fumes & reachability and assure.
- Ensure that the correct dilution is used (check manufacturer's instructions).
- Never dilute a disinfectant by guesswork. Never use two disinfectants together, do not add anything to a disinfectant (including detergent) as this may result in a dangerous chemical reaction.
- Cover the equipment / surfaces thoroughly before disinfection.
- Ensure sufficient contact time between disinfectant and equipment being decontaminated (as per manufacturer's instructions).
- MOP thoroughly after disinfection (if alcohol is used to disinfect then rinsing is not required).
- Discard disinfectant solution after use. Ensure that containers used for disinfection are cleaned.

Monitoring / Review of this Procedure: Repeat with regular intervals

Basil Hygiecare is doing manufacturing and trading high end Disinfectants for hospital, hospitality, house, food & Pharmaceutical industry. We thanking to you for approach and patience to hear about the bio decontamination service.
