- Eco shield wipes are disposable antiseptic wipes used for adult bathing and incontinence care.
- Containing an antiseptic formula with Benzalkonium chloride along with dimethicone & skin conditioners of aloe vera, Eco shield provides protection against infection, The soft disposable cloths avoids skin tear while cleansing and wiping the body of a patient.
- Convenient replacement for the traditional methods of bathing using sponge, preparation bowls, wash cloths, soap, hot water lotions and drying, eco shield provides a cost effective alternative reducing nursing time and laundry bills.

The skin of an immuno-compromised patient is a major reservoir of microbes including bacteria, fungi and pathogen. ECO shield is formulated with an active anti-bacterial agent that helps remove the microbial load while gently cleansing and moisturizing the skin.

Ideal for ICU bed baths and for pre-admission patients, these wash cloth conform to a wide range of proven research. Each wipe contains anti-bacterial agents, silicone agents, skin conditioners and moisturizers, for rapid bactericidal action and residual long-lasting protection which helps to reduce harmful skin bacteria. Diaper rashes and irritation are contained by the presence of anti-microbial and silicone agents that help in removing microbial flora and sealing the pores of skin. Wash cloths can be microwaved.

Ideal barrier for all clinical environments
